**Ornamental, Fruit, Vegetable, and Turfgrass fact sheet revision
on the Plant Disease Diagnostic Web Site.**

Principal Investigator: Karen L. Sirois, Director, Plant Disease Diagnostic Clinic
Department of Plant Pathology, Cornell University, Ithaca,
NY 14853

Abstract:

Approximately 50 fact sheets originally developed by diagnosticians and Plant Pathology Faculty for use in the Plant Disease Diagnostic Clinic at Cornell University were updated, enhanced, and made accessible from the Clinic's web site. The fact sheets provide useful information about various diseases and their pathogens to a diverse clientele. Revisions included updating what is known about the specific pathogens and management of the diseases they cause, as well as photographs of features that may aid in the diagnosis of disease. Graphically representing symptoms and describing the life cycles of the pathogens has increased the value of the fact sheets considerably. The completed project allows anyone with a computer and modem to access information about specific diseases, their characteristics, and recommended management options.
